

ABM Delivers Infrastructure Solution for New York City Electric Bus Initiative

September 9, 2021

Overhead Electric Bus Charger Infrastructure Project Supports New York State's Clean Energy Goals

NEW YORK, Sept. 09, 2021 (GLOBE NEWSWIRE) -- [ABM \(NYSE: ABM\)](#), a leading provider of facility solutions, has initiated a project with the New York Power Authority to support their electrification of New York City Transit (NYCT) buses and planned reduction of greenhouse gas emissions. ABM has begun the design and engineering phase of an electric bus charger infrastructure project to prepare facilities for the next wave of electric buses scheduled for Metropolitan Transportation Authority (MTA) operations in late 2022.

"We're breaking new ground here to help achieve fundamental change in the transportation sector at a critical stage," said Mark Hawkinson, President of ABM Technical Solutions. "These are some of the first bus depots to be fitted with overhead charging pantographs in the northeastern United States, and ABM is proud to contribute our charging infrastructure expertise to help MTA meet their commitment to an all-electric bus fleet by 2040."

Overhead chargers will be installed in bus depots in Manhattan and Brooklyn, as well as additional chargers and transformers in Brooklyn and the Bronx. ABM will also provide maintenance on the charging equipment.

"These facilities weren't originally designed for this kind of technology," said Dennis Doyle, Senior Vice President of ABM Technical Solutions. "Our goal has been making sure these major installations work with the existing building and the MTA's operational plans to efficiently and safely transition to electric buses."

ABM has installed more than 20,000 electric vehicle (EV) charging ports in the U.S. and Canada. As a leading installer of EV chargers, ABM designs and self-performs EV charger installations, providing a turnkey solution that meets compliance, safety, and sustainability goals for both public and private entities.
