

ABM Helps County Prioritize Health and Safety with \$1.8 Million Projected Savings

April 11, 2024

NEW YORK, April 11, 2024 (GLOBE NEWSWIRE) -- ABM (NYSE: ABM), a leading provider of integrated facility services, infrastructure solutions, and parking management, today announced the initiation of an Energy Performance Contracting program for the Clarke County Commission in Alabama. The project includes upgrades to HVAC systems, lighting technology, and related controls that are expected to create \$1.8 million in cost savings over 20 years and will also improve security and indoor air quality for the county's facilities.

"We focus on delivering energy projects that help communities accomplish more and modernize faster," said Mark Hawkinson, President of ABM Technical Solutions. "Local leaders can compress timetables so that community members see the benefits of facility improvements sooner with our unique solutions."

In addition to energy savings and operational cost reductions from lighting and HVAC upgrades, building envelope improvements, and water conservation measures, the project integrates and improves controls technology for the Clarke County Courthouse, including the 911 and Emergency Response office. The project also includes cameras and centralized door and lighting controls for the county jail to improve security and risk mitigation. To address indoor air quality for both county facilities, the project provides needlepoint bi-polar ionization equipment, an advanced pathogen and particle control measure.

"This project has truly been a team effort between the ABM and Clarke County staffs that expanded from a focus on deferred infrastructure investment into an opportunity to enhance facilities with state-of-the-art technology that our County can be proud of," said Tyrone Moyer, Clarke County Commission Chairman.

ABM's [Energy Performance Contracting Program](#) enables local governments and others, such as schools and federal agencies, to invest in critical facility needs like air quality, infrastructure, and sustainability goals. The program is designed to drive costs out of a facility's operating budget, redirecting savings to fund mission critical facility needs. [This video](#) outlines how ABM provides customized technical and financial solutions for government facilities without upfront costs or tax increases.
